## Mdm Chow @ ECON Nursing Home (Buangkok)

In early 2013, Mdm Chow suffered a serious stroke due to cerebral haemorrhage. When she was first admitted to ECON Nursing Home (Buangkok Green), Mdm Chow was in a state of unconsciousness and was diagnosed with little to no chance of regaining consciousness.

In May 2013, she began to receive acupuncture treatments 3 times a week by Senior Physician Lee Choon Tiam.

A month later, she regained consciousness. A subsequent medical examination in July 2013 showed that the haemorrhage has stopped bleeding.

Improvements to Mdm Chow's condition was seen throughout the 4 months of acupuncture treatments. Her naso-gastric tube was removed when she was able to eat blended food. Mdm Chow could also communicate and her spirits improved gradually.

Besides having received acupuncture treatments, Mdm Chow also underwent physiotherapy sessions to accelerate her recovery.

Her family members are very glad and satisfied with her recovery progress in ECON. Mdm Chow has since discharged from our nursing home and is cared for by her family at home.
